

BUG REPORT

Swag Labs — SauceDemo E-Commerce Platform

QA Assignment | June 2025 | Tester: Manual QA | Browser: Brave (Windows)

This report documents all 28 bugs found across 6 user types during manual exploratory testing of <https://www.saucedemo.com>. Bugs are grouped by affected user type and ordered by severity within each group.

Bug Summary

ID	Title	Severity	User
BUG-01	Cart total completely wrong — \$29.99+\$7.99 shows \$75.96	Critical	problem_user
BUG-02	Product URLs switched — clicking one product opens a different one	High	problem_user
BUG-03	Sort dropdown does nothing — products stay in default order	High	problem_user
BUG-04	All product images replaced with dog photos	High	problem_user
BUG-05	Remove button in cart is non-functional	High	problem_user
BUG-06	Add to Cart broken for 3 specific products on inventory page	High	problem_user
BUG-07	Add to Cart also broken on product detail pages for the same 3 products	High	problem_user
BUG-08	Fleece Jacket product link does nothing — no redirect at all	Medium	problem_user
BUG-09	Checkout info — typing in Last Name changes First Name field	High	problem_user
BUG-10	Sort triggers visible JS error — 'Sorting is broken! Reported to Backtrace.'	High	error_user
BUG-11	Add to Cart works on inventory page but silently fails on product detail pages	High	error_user
BUG-12	Remove button in cart is non-functional	High	error_user
BUG-13	Add to Cart works for only 3 of 6 products	High	error_user
BUG-14	Last Name field frozen — no input accepted, no validation error shown	High	error_user
BUG-15	Finish button does nothing — order cannot be completed	Critical	error_user

BUG-16	Sort broken AND prices randomly change on each sort action	Critical	<i>visual_user</i>
BUG-17	Product card prices wrong — correct price only appears in cart	Critical	<i>visual_user</i>
BUG-18	Product detail page shows correct price but inventory card shows wrong price	High	<i>visual_user</i>
BUG-19	Dog photo shown for first product in every sort order	Medium	<i>visual_user</i>
BUG-20	Add to Cart button misplaced for Test.allTheThings() T-Shirt	Medium	<i>visual_user</i>
BUG-21	Checkout button displaced to top right corner of cart page	Medium	<i>visual_user</i>
BUG-22	Cart icon is misplaced in the header	Medium	<i>visual_user</i>
BUG-23	Billing total shows floating point error (e.g. \$57.98(00000000000004))	High	<i>visual_user</i>
BUG-24	Login takes 5+ seconds with no loading indicator	Medium	<i>performance_glitch_user</i>
BUG-25	Tax rate not disclosed — only amount shown	Low	<i>any user</i>
BUG-26	Login error message overlaps inside the form layout	Low	<i>any user</i>
BUG-27	No cursor pointer shown when hovering over cart icon	Low	<i>any user</i>
BUG-28	Sort dropdown — pointer shows on arrow but only text click works	Low	<i>any user</i>

Detailed Bug Reports

problem_user (BUG-01 – BUG-09)

BUG-01 — Cart total completely wrong — \$29.99+\$7.99 shows \$75.96

Severity	Critical
Affected User	problem_user
Module	Shopping Cart
Description	The cart total is exactly double the correct amount. Adding \$29.99 + \$7.99 (correct sum: \$37.98) shows \$75.96, which is $\$37.98 \times 2$. This is a doubling bug — the application is adding the item total twice, either summing each item twice or adding the subtotal to itself before display.

Steps to Reproduce	1. Login as problem_user / secret_sauce 2. Add Sauce Labs Backpack (\$29.99) to cart 3. Add Sauce Labs Bike Light (\$7.99) to cart 4. Click the cart icon 5. Observe the Item total displayed
Expected Result	Item total: \$37.98
Actual Result	Item total: \$75.96 — exactly double the correct total (\$37.98 × 2 = \$75.96). The cart is summing each item twice or adding the subtotal to itself.
User Impact	Critical. Users are shown false totals. In a real store this means financial loss, chargebacks and legal liability.

BUG-02 — Product URLs switched — clicking one product opens a different one

Severity	High
Affected User	problem_user
Module	Product Detail
Description	Clicking a product on the inventory page opens the detail page of a completely different product. For example, clicking the Sauce Labs Backpack opens the Sauce Labs Fleece Jacket detail page instead.
Steps to Reproduce	1. Login as problem_user / secret_sauce 2. Click any product name or image on the inventory page 3. Observe which product detail page opens
Expected Result	Detail page matches the product that was clicked
Actual Result	A different product's detail page opens — product URLs are crossed and mismatched
User Impact	High. Users view wrong product details and may add the wrong item to cart unknowingly.

BUG-03 — Sort dropdown does nothing — products stay in default order

Severity	High
Affected User	problem_user
Module	Product Inventory
Description	Selecting any sort option from the dropdown visually updates the selected option but the product list does not reorder.
Steps to Reproduce	1. Login as problem_user / secret_sauce 2. On inventory page select 'Name (Z to A)' from sort dropdown 3. Observe product list
Expected Result	Products reorder alphabetically Z to A
Actual Result	Products remain in original default order regardless of selection
User Impact	High. Product discovery is broken. Users cannot find items by name or price.

BUG-04 — All product images replaced with dog photos

Severity	High
Affected User	problem_user
Module	Product Inventory
Description	Every product on the inventory page displays a dog photo instead of the correct product image.
Steps to Reproduce	1. Login as problem_user / secret_sauce 2. Observe all product images on the inventory page
Expected Result	Each product shows its correct product photo
Actual Result	All 6 products display the same dog photo
User Impact	High. Products are visually unrecognisable. Users cannot distinguish items by appearance.

BUG-05 — Remove button in cart is non-functional

Severity	High
Affected User	problem_user
Module	Shopping Cart
Description	Clicking Remove on a cart item has no effect. The item stays in the cart and the badge count does not change.
Steps to Reproduce	1. Login as problem_user / secret_sauce 2. Add any item to cart 3. Open cart page 4. Click Remove on the item
Expected Result	Item removed, cart badge decrements
Actual Result	Item remains in cart, badge unchanged, no error shown
User Impact	High. Users cannot remove unwanted items. Cart becomes unmanageable.

BUG-06 — Add to Cart broken for 3 specific products on inventory page

Severity	High
Affected User	problem_user
Module	Shopping Cart

Description	For 3 specific products, clicking Add to Cart on the inventory page has no effect. The other 3 products work normally.
Steps to Reproduce	1. Login as problem_user / secret_sauce 2. Click Add to Cart for each of the 6 products one by one 3. Observe cart badge after each click
Expected Result	All 6 products can be added — badge increments each time
Actual Result	3 products fail silently — badge does not update, no error shown
User Impact	High. Half the catalogue cannot be purchased. Bug is invisible to the user.

BUG-07 — Add to Cart also broken on product detail pages for the same 3 products

Severity	High
Affected User	problem_user
Module	Product Detail
Description	The same 3 products whose Add to Cart fails on the inventory page also fail on their individual detail pages, confirming a product-ID-level data binding issue.
Steps to Reproduce	1. Login as problem_user / secret_sauce 2. Click through to detail page of one of the 3 affected products 3. Click Add to Cart on the detail page 4. Check cart badge
Expected Result	Cart badge increments
Actual Result	No effect — badge unchanged, button state unchanged
User Impact	High. Users cannot add these items from any page on the site.

BUG-08 — Fleece Jacket product link does nothing — no redirect at all

Severity	Medium
Affected User	problem_user
Module	Product Detail
Description	Clicking the Sauce Labs Fleece Jacket product name or image produces no navigation whatsoever — not even to a wrong page.
Steps to Reproduce	1. Login as problem_user / secret_sauce 2. On the inventory page click 'Sauce Labs Fleece Jacket' name or image
Expected Result	Navigate to product detail page /inventory-item.html?id=5
Actual Result	Nothing happens — no navigation at all
User Impact	Medium. Users cannot view or purchase this product.

BUG-09 — Checkout info — typing in Last Name changes First Name field

Severity	High
Affected User	problem_user
Module	Checkout
Description	On the checkout information page, keyboard input directed at the Last Name field incorrectly modifies the First Name field. Last Name stays empty and the form cannot proceed.
Steps to Reproduce	1. Login as problem_user / secret_sauce 2. Add item → cart → Checkout 3. Type 'John' in First Name 4. Click Last Name field and type 'Doe' 5. Observe both fields
Expected Result	First Name: John, Last Name: Doe — form proceeds to step 2
Actual Result	First Name is modified by Last Name input; Last Name stays empty; form shows error and does not proceed
User Impact	High. Checkout completely blocked for this user.

error_user (BUG-10 – BUG-15)

BUG-10 — Sort triggers visible JS error — 'Sorting is broken! Reported to Backtrace.'

Severity	High
Affected User	error_user
Module	Product Inventory
Description	Attempting to sort products shows a user-facing error banner: 'Sorting is broken! This error has been reported to Backtrace.' This exposes the name of an internal error tracking tool to end users.
Steps to Reproduce	1. Login as error_user / secret_sauce 2. On the inventory page select any sort option from the dropdown
Expected Result	Products reorder without errors
Actual Result	Error banner displayed: 'Sorting is broken! This error has been reported to Backtrace.'
User Impact	High. Functional failure plus information disclosure. Internal tool names must never be shown to end users.

BUG-11 — Add to Cart works on inventory page but silently fails on product detail pages

Severity	High
Affected User	error_user
Module	Product Detail
Description	Add to Cart works correctly on the inventory page for error_user, but silently fails when clicking the button on any individual product detail page. No error is shown.
Steps to Reproduce	1. Login as error_user / secret_sauce 2. Confirm Add to Cart works on inventory (badge updates) 3. Click through to any product detail page 4. Click Add to Cart on detail page 5. Check cart badge
Expected Result	Cart badge increments — same as inventory page behaviour
Actual Result	Cart badge does not update. Silent failure, no error shown.
User Impact	High. Inconsistent behaviour between pages. Users who check product details before buying cannot add from there.

BUG-12 — Remove button in cart is non-functional

Severity	High
Affected User	error_user
Module	Shopping Cart
Description	Clicking Remove on a cart item as error_user has no effect. Item remains in cart, badge count unchanged.
Steps to Reproduce	1. Login as error_user / secret_sauce 2. Add any item to cart 3. Open cart page 4. Click Remove on the item
Expected Result	Item removed, cart badge decrements
Actual Result	Item stays in cart — Remove button does nothing
User Impact	High. Users cannot manage their cart once items are added.

BUG-13 — Add to Cart works for only 3 of 6 products

Severity	High
Affected User	error_user
Module	Shopping Cart
Description	Only 3 of the 6 products can be added to cart on the inventory page. Clicking Add to Cart on the other 3 has no visible effect.

Steps to Reproduce	1. Login as error_user / secret_sauce 2. Attempt to click Add to Cart on each of the 6 products 3. Observe cart badge count after each click
Expected Result	All 6 products can be added — badge increments to 6
Actual Result	Only 3 products add successfully — the other 3 have no effect
User Impact	High. Users cannot purchase half the product catalogue.

BUG-14 — Last Name field frozen — no input accepted, no validation error shown

Severity	High
Affected User	error_user
Module	Checkout
Description	The Last Name input field on the checkout info page does not accept keyboard input. Despite being empty, clicking Continue shows no validation error and the form silently proceeds — bypassing required field validation.
Steps to Reproduce	1. Login as error_user / secret_sauce 2. Add item → cart → Checkout 3. Type in the Last Name field — observe nothing appears 4. Fill only First Name and Postal Code 5. Click Continue
Expected Result	Last Name accepts input; validation error shown if left empty
Actual Result	Field accepts no input AND no validation error is shown — form proceeds with empty required field
User Impact	High. Double failure: broken input and broken validation. Incomplete records would reach backend in production.

BUG-15 — Finish button does nothing — order cannot be completed

Severity	Critical
Affected User	error_user
Module	Checkout
Description	On the order summary page (checkout step 2), clicking Finish produces no response. No navigation, no confirmation, no error message. The user is permanently stuck.
Steps to Reproduce	1. Login as error_user / secret_sauce 2. Add item → cart → Checkout → fill info → Continue 3. On order summary page click Finish
Expected Result	Navigate to order confirmation page: 'Thank you for your order!'
Actual Result	Nothing happens. Page does not change. Button click has zero effect.
User Impact	Critical. Users cannot complete purchases at all. This is the most severe possible e-commerce bug.

visual_user (BUG-16 – BUG-23)

BUG-16 — Sort broken AND prices randomly change on each sort action

Severity	Critical
Affected User	visual_user
Module	Product Inventory
Description	For visual_user, the sort function does not correctly reorder products, and additionally the prices displayed on product cards change to random wrong values every time a sort option is selected.
Steps to Reproduce	1. Login as visual_user / secret_sauce 2. Note current prices on inventory page 3. Select 'Price (low to high)' from sort dropdown 4. Observe product order and prices 5. Select another sort and observe again
Expected Result	Products reorder correctly; prices remain stable and accurate
Actual Result	Products do not sort correctly; prices change to random wrong values on each sort action
User Impact	Critical. Unstable, randomly changing prices completely destroy user trust in the platform.

BUG-17 — Product card prices wrong — correct price only appears in cart

Severity	Critical
Affected User	visual_user
Module	Product Inventory
Description	Prices shown on inventory product cards are incorrect. The correct prices only appear once items are added to the cart page.
Steps to Reproduce	1. Login as visual_user / secret_sauce 2. Note the price of any product on the inventory page 3. Add to cart 4. Open cart and compare the price
Expected Result	Same price displayed on product card and in cart
Actual Result	Product card shows wrong price; cart shows the correct price
User Impact	Critical. Bait-and-switch pricing appearance. Major trust and potential legal risk.

BUG-18 — Product detail page shows correct price but inventory card shows wrong price

Severity	High
Affected User	visual_user
Module	Product Detail
Description	The individual product detail page shows the correct price, but the inventory card for the same product shows a wrong price. Three inconsistent price states exist: wrong on card, correct on detail page, correct in cart.
Steps to Reproduce	1. Login as visual_user / secret_sauce 2. Note price of a product on inventory card 3. Click product to open detail page — note that price 4. Add to cart and check cart price
Expected Result	Consistent price across card, detail page and cart
Actual Result	Card: wrong price. Detail page: correct price. Cart: correct price. Three different values.
User Impact	High. Three-way inconsistency causes confusion and distrust when users compare pages.

BUG-19 — Dog photo shown for first product in every sort order

Severity	Medium
Affected User	visual_user
Module	Product Inventory
Description	Whichever product appears in the first position after any sort is applied displays a dog photo instead of its correct product image. The bug follows the first position, not a specific product.
Steps to Reproduce	1. Login as visual_user / secret_sauce 2. Note the image of the first listed product 3. Apply any sort option 4. Observe the image of the new first product
Expected Result	Every product always shows its own correct image regardless of sort order
Actual Result	The product in position 1 always shows a dog photo after any sort
User Impact	Medium. Position-based image bug. More subtle than problem_user's full replacement but still confusing.

BUG-20 — Add to Cart button misplaced for Test.allTheThings() T-Shirt

Severity	Medium
Affected User	visual_user

Module	UI / Layout
Description	The Add to Cart button for the Test.allTheThings() T-Shirt (Red) product card is displaced outside the card boundaries, misaligned with all other product card buttons.
Steps to Reproduce	1. Login as visual_user / secret_sauce 2. Scroll to 'Test.allTheThings() T-Shirt (Red)' 3. Observe the Add to Cart button position
Expected Result	Button is at the bottom of its product card, aligned with all other cards
Actual Result	Button visually displaced outside expected card boundaries
User Impact	Medium. Confuses users and reduces trust in interface quality.

BUG-21 — Checkout button displaced to top right corner of cart page

Severity	Medium
Affected User	visual_user
Module	UI / Layout
Description	The Checkout button on the cart page appears at the top right of the page instead of its expected bottom-right position alongside Continue Shopping.
Steps to Reproduce	1. Login as visual_user / secret_sauce 2. Add any item to cart 3. Open cart page 4. Observe Checkout button position
Expected Result	Checkout button at bottom right of page next to Continue Shopping
Actual Result	Checkout button at top right corner of page
User Impact	Medium. Users may not find the button, causing cart abandonment.

BUG-22 — Cart icon is misplaced in the header

Severity	Medium
Affected User	visual_user
Module	UI / Layout
Description	For visual_user the shopping cart icon in the top navigation bar is visually displaced from its standard position.
Steps to Reproduce	1. Login as visual_user / secret_sauce 2. Observe the cart icon position in the header navigation bar
Expected Result	Cart icon in standard top-right header position as seen for other users
Actual Result	Cart icon is displaced from its expected position

User Impact	Medium. Core navigation element misplaced. Users may struggle to access their cart.
-------------	---

BUG-23 — Billing total shows floating point error (e.g. \$57.98(0000000000004))

Severity	High
Affected User	visual_user
Module	Checkout
Description	On the order summary page, the item total displays raw floating point precision output instead of a clean formatted currency value.
Steps to Reproduce	1. Login as visual_user / secret_sauce 2. Add multiple items to cart 3. Proceed through checkout to order summary page 4. Observe Item total value
Expected Result	Item total: \$57.98 (clean formatted currency)
Actual Result	Item total: \$57.98(0000000000004) — raw floating point error exposed in UI
User Impact	High. Broken numbers on a payment page instantly destroy user confidence and cause abandonment.

performance_glitch_user (BUG-24)

BUG-24 — Login takes 5+ seconds with no loading indicator

Severity	Medium
Affected User	performance_glitch_user
Module	Performance
Description	Every single interaction for performance_glitch_user is severely delayed — not just login. This includes: login taking 5+ seconds, clicking a product to open its detail page, adding items to cart, navigating between pages, and proceeding through checkout steps. Each action causes the page to appear frozen with no loading indicator shown at any point. The entire application is sluggish from start to finish for this user.
Steps to Reproduce	1. Go to https://www.saucedemo.com 2. Enter username: performance_glitch_user, password: secret_sauce 3. Click Login 4. Time how long until the inventory page appears
Expected Result	All interactions complete within 2 seconds; any delayed action should show a loading indicator

Actual Result	Every interaction across the entire site is delayed by 5+ seconds — login, page navigation, add to cart, checkout steps all hang with no loading indicator at any point
User Impact	High. The entire user journey is broken — from login to checkout every step hangs. A user would abandon long before completing a purchase. The complete absence of any loading feedback at any stage makes it appear the site has crashed repeatedly throughout the session.

All Users — Minor Bugs (BUG-25 – BUG-28)

BUG-25 — Tax rate not disclosed — only amount shown

Severity	Low
Affected User	any user
Module	Checkout
Description	The order summary page shows a tax amount (e.g. Tax: \$2.40) but never discloses what percentage rate was applied. The rate is 8% but this is not shown anywhere.
Steps to Reproduce	1. Login as any valid user 2. Add item to cart and proceed through to order summary 3. Observe the tax line
Expected Result	Tax: \$2.40 (8%) — or equivalent disclosure of the rate applied
Actual Result	Tax: \$2.40 — percentage rate is never shown
User Impact	Low. Minor transparency gap. In some jurisdictions displaying the applicable tax rate is legally required.

BUG-26 — Login error message overlaps inside the form layout

Severity	Low
Affected User	any user
Module	Authentication
Description	When a login attempt fails, the red error banner renders between the password field and the Login button, interrupting the form's visual flow instead of appearing cleanly outside it.
Steps to Reproduce	1. Go to https://www.saucedemo.com 2. Click LOGIN without entering any credentials 3. Observe the position of the error banner relative to the form fields

Expected Result	Error message appears outside the form container — below it or above it — without breaking the form layout
Actual Result	Error banner is sandwiched between the password field and the Login button inside the form
User Impact	Low. Cosmetic/layout bug only. Form still functions correctly. Reduces perceived polish.

BUG-27 — No cursor pointer shown when hovering over cart icon

Severity	Low
Affected User	any user
Module	UI / Layout
Description	Hovering the mouse over the cart icon in the header does not display a pointer cursor despite the icon being a clickable link. Users receive no visual indication that it is interactive.
Steps to Reproduce	1. Login as any user 2. Move mouse cursor over the cart icon in the header 3. Observe the cursor style
Expected Result	Cursor changes to pointer (hand icon) on hover — standard behaviour for clickable elements
Actual Result	Cursor remains as the default arrow — no pointer affordance shown
User Impact	Low. Minor UX issue. Reduces discoverability especially for less experienced users.

BUG-28 — Sort dropdown — pointer shows on arrow but only text click works

Severity	Low
Affected User	any user
Module	Product Inventory
Description	The sort dropdown shows a pointer cursor when hovering over the dropdown arrow icon, but clicking the arrow does not open the dropdown. Only clicking the text area of the dropdown triggers it.
Steps to Reproduce	1. Login as any user 2. Hover over the sort dropdown — pointer shown on arrow area 3. Click the arrow area 4. Observe whether dropdown opens
Expected Result	Clicking anywhere on the dropdown control opens it
Actual Result	Arrow shows pointer cursor but clicking it does not trigger the dropdown — only clicking the text portion works
User Impact	Low. Minor UX inconsistency. Misleads users about the interactive area.
